Superior Clamping and Gripping

SCHUNK, the family-owned company, is a worldwide leader for equipping modern manufacturing and robot systems. More than 3,500 employees in 9 plants and 34 directly owned subsidiaries ensure an intensive market presence. With more than 11,000 standard components SCHUNK offers the world's largest assortment of gripping systems and clamping technology from one source. Due to the digitalization of the portfolio, users can plan their processes efficiently, transparently, and economically. In addition, they benefit from the comprehensive application knowledge surrounding tomorrow's innovative manufacturing.

Cordially yours, the Schunk family

Product Overview

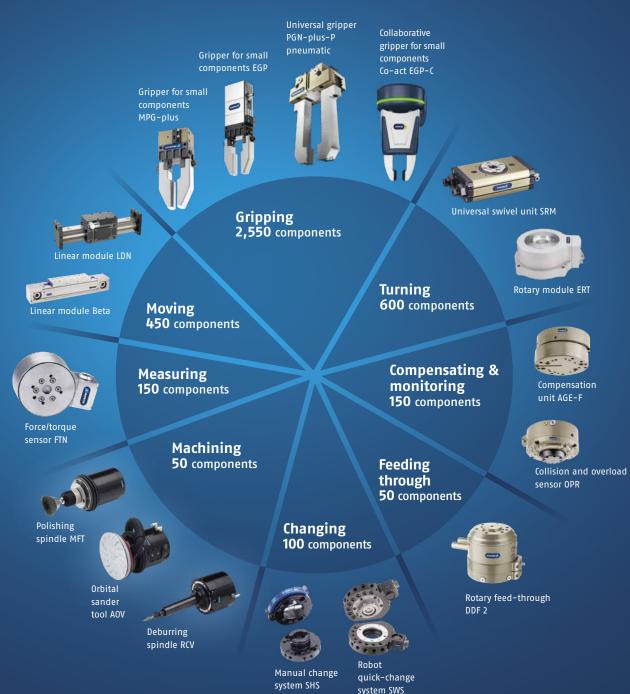

Benefit from the SCHUNK Modular System with over 4,000 Standard Components.

For every Robot, for every Industry, for every Handling Task.

SCHUNK sets standards in the automotive industry world-wide with its components and gripping systems. Our robot accessories include a uniquely comprehensive standard range of modules for the mechanical, sensory, and power connection of handling devices and robots. The comprehensive range of robust and long-lasting grippers for small components and universal grippers

features high product quality, precision, and numerous monitoring options.

What's more, SCHUNK's axis system handling solutions open up new perspectives for cost and benefit-optimized automation solutions from a single source.

SCHUNK

Robots: Equipped by SCHUNK

The SCHUNK End-of-Arm Competence for your Robot. From the standard Component to the standard Gripping System.

SCHUNK provides the most comprehensive range of modules for the mechanical, sensory, and power connection of handling devices and robots. Quick-change systems, rotary feed-throughs, collision and overload protection modules, force sensors, as well as compensation units, and insertion units ensure optimal interplay between the robot arm and gripper. The basis for this high technology "Made in Germany" is our constant innovation.

Product Overview

Cobots: Equipped by SCHUNK

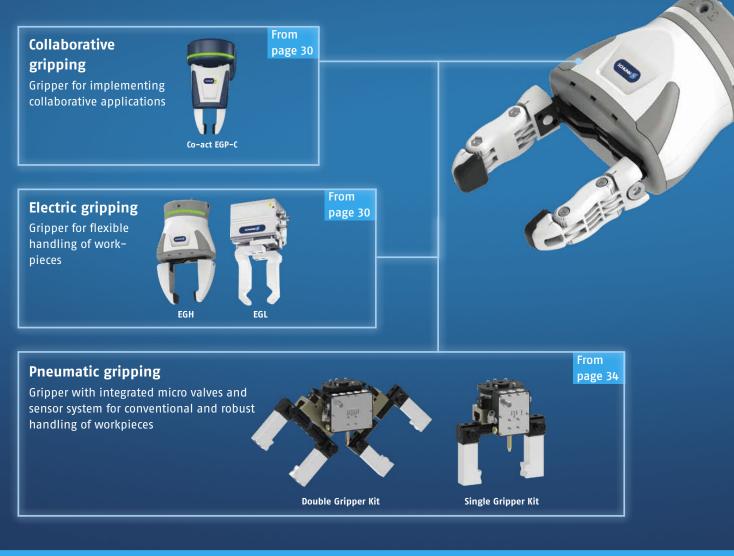

Modular. Flexible. Simple.

SCHUNK offers complete Plug & Work portfolios with a variety of products for simple use on different cobots and lightweight robots. They consist of electrically and pneumatically actuated grippers, quick-change modules and force/torque sensors that are specifically adapted to robot arms from different cobots.

Using adaptations and interfaces, the modules can be combined with the robot arms in no time at all and quickly exchanged.

For further product information visit: schunk.com/plug-and-work

Plug & Work Portfolio for Cobots

Product Overview

Measuring

6-axis force/torque sensor for measuring and processing forces and moments on the robot arm, completely equipped with adapter plates

Changing

Change systems for manual exchange of different grippers and actuators with suitable feed-through module

R·EMENDO Robotic Material Removal

The right Tool for all Machining Processes.

Our product range "Robotic Material Removal" has received its own name: R-EMENDO.

R stands for robotics and EMENDO means machining: Improving a workpiece by removing material – such as deburring, grinding or polishing. Get to know more about the R-EMENDO tools.

Increased efficiency and consistent quality

With the new SCHUNK tools, you can take your machining process to a new level. Automation of previously manual work steps increases your productivity while delivering consistently perfect results.

Chamfering edges, removing burrs or smoothing surfaces – SCHUNK not only offers the right tool for the individual machining operations, but also supports the entire application process – from the selection of the right components to the optimal parameters for a functioning overall solution.

Product Overview

Compensating

Pneumatically controlled compensation unit with position measurement for the adjustment of compensation and contact forces.

For further product information visit: schunk.com/remendo

Axis Systems: Equipped by SCHUNK

SCHUNK End-of-Arm Competence for your Gantry. Over 4,000 Components for Handling and Assembly.

Page 40

With the linear modules service area combined with rotary modules, swivel units, grippers, quick-change systems, rotary indexing tables and sensor systems, SCHUNK opens up new perspectives for cost and benefit-optimized automation solutions.

Designed to be compact and from the modular system: From the axis right up to the gripper finger and combined for customized axis system handling solution.

Product Overview

The new Standard in Assembly Automation.

Easy to Create!

Complete Pick & Place applications can be intuitively

and assembly effort

configured with minimal design

schunk.com/3d-configurator

The 24 V Mechatronics Range from SCHUNK.

For the first time, complete assembly systems with linear modules, rotary modules and grippers can be entirely implemented using the 24 V technology as a basis. The reduced maintenance costs, high process stability, and lower operating costs are revolutionary. The 24 V mechatronics program offers the advantages of mechatronic modules whilst being as simple as pneumatics. This results in revolutionary advantages for handling in assembly automation, for instance such as very low maintenance effort, simple and fast commissioning, and high energy efficiency.

Pick & Place Production Cell Electric, simple, compact and fast implementation.

Easy to Start Up!

Simple commissioning of the mechatronic modules. Simpler and more intuitive than pneumatic modules

Plug & Work!

Easily combine, integrate and seamlessly commission mechatronic SCHUNK grippers, rotary and linear modules from the modular system

Easy to Save Money!

Observing the procurement, operating and maintenance costs in direct comparison with purely pneumatic systems, the deployment becomes economically after just a few million cycles.

SCHUNK Grippers The world's most proven Grippers on the Market.

SCHUNK offers the world's most comprehensive portfolio of grippers. Standard grippers, ready-toinstall gripping system assembly groups and an extremely wide range of customized gripping system solutions for your handling and assembly, automation and robot end-of-arm solution. We always meet the most complicated gripping requirements, and we solve them. The result: robust and durable gripping systems which ensure maximum reliability in systems and machines all over the world for 30 years.

Over **2,500** standard grippers Over **300** mechatronic grippers More than **12,000** implemented gripping system solutions More than **1,000,000** products in use worldwide

MTB application kit

The right kits for a quick entry into the world of automated machine loading and unloading

The MTB application kits enable quick and easy implementation of automated machine loading. The specific application kits take on the important key role of workpiece handling and workpiece clamping. They seamlessly fit into the machine environment.

schunk.com/plug-work-mtb

Your benefits:

- Process reliability
 By means of a sealed valve box, the electronic
 system is protected against dust, chips and oil
- **Increased productivity** This is achieved by automated removal of chips and coolant from the workpiece and clamping force block
- Increased productivity

The double gripper kit enables workpiece removal and reloading of the machine in one work step

SCHUNK Gripper PWG-plus

Compact powerhouse

The double oval piston drive, the one-piece, high-strength aluminum housing and the practically wear-free T-bar drive make the PWG-plus 2-finger angular gripper a compact and robust powerhouse. Depending on the application it can be equipped with or without a mechanical gripping force maintenance device. In addition, extensive accessories are available, including inductive sensors and magnetic switches.

schunk.com/pwg-plus

Your benefits:

- Workpiece weights between 0.5 kg and 7.3 kg
- Gripping moments amount between 3.5 Nm and 143 Nm
- Stroke per finger 15°
- Overgrip angle per jaw at least 3°
- Maximum force transmission and low wear due to robust bone drive
- High power density due to oval piston drive
- Flexible design of workpiece supports because of connection threads and centering possibilities

SCHUNK Adhesive Grippers ADHESO

The bionic-inspired ADHESO gripper technology is based on the principle of adhesion, using intermolecularly acting Van der Waals forces for handling various workpieces and materials. Due to the high variability of the adhesive structures, grippers with ADHESO technology can be individually tailored to different applications.

Your benefits:

- Low operating costs due to energy-efficient gripping without an additional energy supply
- Gripping without visible residue for sensitive workpieces

SCHUNK Servo-electric 5-Finger Gripping Hand SVH

The ready for series production version of the anthropomorphic SCHUNK 5-finger hand grips nearly as perfectly as the human hand. Due to the moving parts with a total of nine drives, various gripping operations can be executed with high sensitivity.

Your benefits:

- Suitable for mobile applications Low energy consumption at 24 V DC
- Extremely compact design due to integration of the complete control, regulator and power electronics in wrist

Handling and Assembly – SCHUNK has the perfect Solution for every Requirement.

With our wide range of pneumatically and electrically driven linear, rotary, and gripper standard components and many products for robots, SCHUNK offers perfect prerequisites for individual handling solutions. An enormous variety of automated solutions can be implemented by using just a few standard components – fast, simple, and professional. Application-specific automation systems provide high dynamics during short cycle times – from small parts assembly in the production of electronics to the loading and unloading of machine tools to the handling of food products, pharmaceuticals or medical devices.

Over **4,000** standard components in the most comprehensive selection of modules for handling and assembly

SCHUNK Handling Components

Product Overview

Ţ

The pneumatic

SCHUNK Swivel Module SRM

The most robust and powerful Swivel Module on the Market

Robust and large flange connection diagram for higher forces and torques with compact design

Robust seal made of FKM, very long-life and resilient

Modular system

Individual fields of application through optional air feed-through MDF and electrical feed-through EDF, can be combined in any way desired

Up to 25% more torque moment due to the large pitch circle

of the pinion

Pre-adjusted shock absorber stroke Meaning faster commissioning

Up to 55% larger center bore

The biggest of its class. Problem-free feed-through of supply lines and electrical cables

Specially developed shock absorbers

for increased moments of inertia for shorter swiveling times

Technical data

Weight 0.252 .. 9.74 kg

Rotating angle 0° .. 180° (variant 90°)

Torque 0.45 .. 23.7 Nm

Mass moment of inertia

7 kgm²

Pneumatic

Rotary Modules,

Pneumatic Linear Modules

SCHUNK Universal Linear Module LM

Pneumatic linear modules LM from SCHUNK are characterized by long life span and reliability. The use of junction roller guides convinces with respect to accuracy, rigidity, and low friction. And also in terms of minimal space requirements, the linear modules score with their very compact design, even when two guide rails running in parallel are used.

schunk.com/Im

Your benefits:

- 5 sizes with a total of 52 stroke variants
- High availability off the shelf
- Over **20 years of experience** with junction roller guides
- **Can be flexibly combined** by up to 38 fastening threads on one side
- No additional interfering contour when fitting shock absorbers or sensors

Intermediate stops ZZA for LM and KLM pneumatic linear modules

Up to two intermediate stops ZZA are possible per linear module. Therefore up to four positions are available to the linear unit. With the intermediate stops ZZA on a linear unit, NOK parts (not OK parts) can be rejected for instance on an assembly station.

Your benefits:

- Up to two intermediate positions
 possible
- No oscillation in the intermediate position
- Can be moved from the intermediate position **in both directions**

SCHUNK Linear Module Beta

Linear module with adaptive drive.

The product range includes 12 sizes. Depending on the application, choose between spindles, belt or rack and pinion depending on the drive type as well as between roller guidance and profiled rail guidance. The Beta series is outstanding for its economical axis applications with high requirements with respect to dynamism and smooth running. Even long stroke lengths can be implemented with this drive system.

schunk.com/beta

Your benefits:

- 12 profile sizes
- 3 drive types (spindle/belts/gear rack)
- 2 guide systems • 100% modular for high availability
- · 20 years of experience with linear systems
- 100% flexible actuation due to adaptable motors

SCHUNK Quick-change System SWS

Fast effector change for high flexibility in production, handling and assembly.

When changing grippers, tools and other effectors, an automatic quick-change system (as robot accessory) can clearly reduce manual work or even entirely replace it. While manually re-equipping a pneumatic effector takes ten to thirty minutes, a quick-change system reduces the time needed down to ten to thirty seconds, whereby the mere locking and unlocking needs just milliseconds.

Your benefits:

- Payloads up to 1,350 kg possible
- Patented self-locking locking system
- No-touch locking™
 Secure locking without making contact, for the SWS even when the SWK and SWA do not touch
- **19 sizes** for optimal size selection and a broad application range
- All functional components made of hardened steel for high load bearing capacity of the change system
- **Transmission possibility** for electric, pneumatic and fluid media
- For a process-reliable connection between the quick-change master and the quick-change adapter with self-sealing couplings

SCHUNK Collision and Overload Sensor OPR

The effective protection both for robots and for handling devices against damage as a result of collision or overload. Unique with automatic reset.

In case of overloads or collisions, the tool plate deflects and, at the same time, automatically actuates the system's emergency stop. The system's sensitivity can be adjusted via the operating pressure.

Your benefits:

- Automatic reset into the center position
- Overload detection occurs in X-, Y- (+/-) and Z-direction and equally during rotation around the X-, Y- and Z-direction
- Integrated cable breakage control to avoid malfunctions
- Also available as **IP65** protected version
- Triggering forces and moments can be adjusted via operating pressure

SCHUNK FTN 6-axis Force/Torque Sensor

Interface variety with Ethernet, EtherNet/IP, EtherCAT, DeviceNet and a CAN interface.

With its high-speed data output, four possible communication protocols, remote monitoring via LAN and configuration via web interface, the 6-axis force/torque sensor FTN is currently the most multi-functional force/torque sensor for industrial automation. Suitable for machining tasks in the field of e.g. grinding and polishing, robot assemblies or robotic surgery as well as applications in rehabilitation and neurological applications. The sensor allows for automating difficult assembly, machining and finish machining tasks, that could previously only be performed by hand or using complex special machines.

Your benefits:

- 17 sizes
- Torque ranges between 0.12 Nm and 6,000 Nm selectable
- Load ranges between 12 N and 40,000 N selectable
- The sensor measures the force and the torque in all six degrees of freedom.
- Simple process integration due to simple interface compatibility
- Possible remote monitoring, via LAN connection

SCHUNK Deburring Spindle RCV

The solution for perfect finishing. Up to 40,000 RPM

Tolerances can be compensated during machining by the oscillating compensation in the X axis.

Your benefits:

- Tool rigidity adjustable via compressed air for clean machining in any orientation
- Flexible use on robot arms or as a stationary unit
- **Compliant** in axial or radial direction for simplified robot programming.
- Use of proven tool inserts for simple automation of manual machining processes
- Simple exchange of wearing parts for maximum system availability and minimum spare parts requirements

SCHUNK

Product Overview

The right Solution for every Application

SCHUNK original accessories for sensor systems and pillar assembly components enhance the versatility and the field of application of our standard modules for your application. Optimal functionality, reliability, and precise positioning are ensured by SCHUNK original accessories. Experience highest quality and utmost longevity.

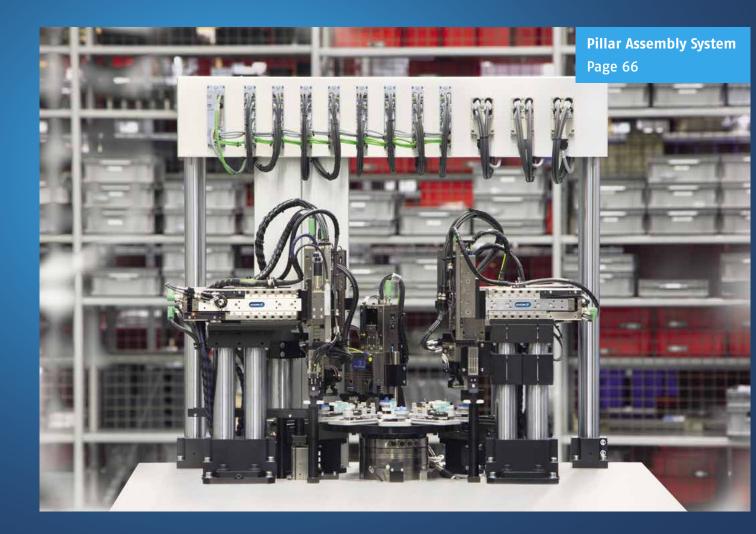

Original accessories for an excellent accuracy of fit and function. Compatible for every SCHUNK standard product, easy integration into existing plants and systems.

Pillar assembly system **100%** variable, thousands of combinations of SCHUNK components are possible

The world's **most extensive** range of accessories for gripping systems

More than 150 sensors for precise force measurement and workpiece and position monitoring

SCHUNK

Component Overview

SCHUNK Pillar Assembly System SAS.

Over 10,000 possible Combinations.

With more than 10,000 possible combinations, SCHUNK offers the world's most comprehensive range of pillar assembly applications. The SCHUNK pillar assembly system allows for a combination of diverse handling modules without mechanical adaptation by means of mounting and centering holes, for an exact fit and angular precision as well as the safe, stable, and reproducible mounting of components.

Adjustment Unit VEH

For easy fine adjustment of the finished assembly

- For linear and rotary compensation
- · Adjustable with hexagon socket wrench
- Suitable for single and double sockets

Pillar Assembly System High level of precision despite high modularity and flexibility

- Three different pillar diameters
- Up to 1,000 mm pillar length
- 17 elements combined as desired
- Direct screw connection for SCHUNK components

3 Media Routing

Simple and fast combinations from the modular system

- Precise hose and cable guidance possible
- Either through the hollow pillars or attached with clips along the pillars
- Media hose for supplying the actuators can be mounted directly

Grippers

SCHUNK Grippers Our Response to Flexibility: Variety in Accessories.

Along with the world's most extensive gripper range, SCHUNK also provides an unmatched range of offering. The PGN-plus universal gripper features a large number of variants and a superior range of accessories offering everything needed for flexible use in your specific automation application. For each kind of application and handling requirement – including under extreme conditions.

Accessories

Grippers

1 PGN-plus-P

Universal 2-finger parallel gripper with a high gripping force and high maximum moments due to the use of a multi-tooth guidance

Sensor Systems

2 IN ...

Inductive proximity switch with molded cable and straight cable outlet

3 IN ...-SA

Inductive proximity switch with molded cable and laberal cable outlet

4 IN-C 80

Inductive proximity switch, directly plugable

5 FPS

Flexible position sensor for monitoring up to five different, freely selectable positions

6 APS-Z80

Inductive position sensor for precise position detection of the gripper jaws with analog output

7 APS-M1S

Mechanic measuring system for accurate acquisition of the gripper jaw posiiton with analog output

8 MMS 22

Magnetic switch with straight cable outlet for monitoring a position

MMS 22-PI1

Magnetic switch with straight cable outlet for monitoring a freely programmable position

9 MMS 22-PI2

Magnetic switch with straight cable outlet for monitoring two freely programmable position

10 MMS 22-PI1-HD

MMS 22-PI1 in robust design

MMS 22-PI2-HD MMS 22-PI2 in robust design

(1) MMS 22-SA

Magnetic switch with lateral cable outlet for monitoring a position

MMS 22-PI1-SA

Magnetic switch with side cable outlet for monitoring a freely programmable position

12 MMS-P

Magnetic switch with straight cable outlet for monitoring two freely programmable position

1 MMS-A

Analog magnetic switch with straight cable outlet for measuring the gripper jaw position with analog output and teach function

Complementary Products

🚯 CWS

Manual change system with integrated air feed-through for simple exchange of the handling components

🚯 TCU

Tolerance compensation unit for compensation of small tolerances in the plane

6 SDV-P-E-P

Pressure maintenance valve for temporary force and position maintenance

🕧 AGE

Compensation unit for compensation of large tolerances along the X and Y axes

18 ASG

Adapter plate for combining various automation components in the modular system

19 CLM

Linear module with pneumatic drive and scope-free pre-loaded junction rollers

HUE Sleeve for protection against dirt

21 SAD

Dustproof version, retrofit kit

Finger Accessories

2 UZB

The universal intermediate jaw allows for the fast tool-free and reliable plugging and shifting of top jaws on the gripper.

23 BSWS-AR

Adapter coupling of jaw quick-change system for fast, manual change of top jaws

2 BSWS-B

Locking mechanism of the jaw quick-change system for fast, manual change of top jaws

25 BSWS-A

Adapter coupling of the jaw quick-change system for adaptation to the customized finger

26 Customized fingers

27 BSWS-ABR

Finger blank made of aluminum with interface to the jaw quick-change system

BSWS-SBR

Finger blank made of steel with interface to the jaw quick-change system

28 BSWS-UR

Locking mechanism for the integration of the jaw quick-change system into customized fingers

29 ABR/SBR

Finger blanks made of steel or aluminum with standardized screw connection diagram

30 ZBA

Intermediate jaws for reorientation of the mounting surface

= well suited/fully supported

SCHUNK Compact Change System CWS

The flat and weight-reduced manual change system CWS from SCHUNK ensures the fast manual change of grippers at the robot when re-equipping for a new range of parts.

Your benefits:

- Simple tool change on the robot
- Full compatibility due to integrated ISO robot flange
- The screw connection diagram is used to mount the most important SCHUNK gripping and compensation modules directly on the quick-change system without an adapter plate

| With highly diverse workpieces for quick jaw changes with any clamping contours | With highly diverse workpieces that can be covered by increasing the clamping width | For applications in which the force or position must be maintained temporarily | For grippers used in dirty envi- ronments and where they get in contact with liquids. |
| The BSWS consists of two adapter pins and the locking mechanism located in the customized finger. The form-fit locking mechanics ensures a fast exchange of the gripper fingers | Allows fast tool-free and reliable replugging and shifting of top jaws | With a loss of air pressure, venting of the module will be prevented tem- porarily by the pressure maintenance valve | The cover protects the gripper against external influences. Depending on the application, the edge of the cover can be addition- ally sealed for applications up to IP65. |
| One gripper can be used universally in various applications Quick and easy for high flexibility Firm up to the max. loadability of the base jaws Clamping contour can be created as required | Tool-free adjustment and clamping for quick and easy conversion Stable guide bar, suitable for long gripper fingers | Versatile in its application, since it has standard air connections Manual air bleed screw means no removal of pressurized hoses Variant SDV-P-E-P available for direct mounting on SCHUNK grippers | Flexible in use: can be retrofitted Space-saving due to low interfering contours Suitable for grippers PGN-plus-P, PGN-plus, PZN-plus, EGN, and EZN |

Complementary Products

SCHUNK Compensation Unit TCU

The TCU can compensate in the X and Y directions, allowing it to correct angle errors and provide rotational compensation.

Your benefits:

- Suitable for gripper types PGN-plus, PGN-plus-P, PZN-plus, DPG-plus and DPZ-plus
- The compensation paths in X/Y directions are 2 to 4 millimeters depending on the size, while the compensation angles are between 1.5° and 3.5°
- Maximum handling weights between 1 and 24 kg, depending on gripper size

Magnetic Switch MMS – IO-Link

A magnetic switch is used for monitoring the status of automation components. They detect the magnets fixed inside the component without contact. In addition to further process data, the sensor outputs the process of the magnetic field via the IO-Link interface.

Your benefits:

- Control via IO-Link for evaluation of data
- Integrated electronics lead to a more compact design and allows use of cable with standard plug connectors
- Suitable for confined spaces due to teaching via IO-Link interface
- Version with LED display is used to indicate the status of the IO-Link connection
- **C-slot sensor** for space-saving, easy and fast assembly on the product

Inductive Proximity Switch IN

Reliable. Contactless. Easy assembly.

Inductive proximity switches are used to scan the current status of automation components. SCHUNK supplies them in two versions: IN (sensor with 30 cm cable and cable connector) and INK (sensor with 2 m supply cable and wire strands for connecting).

Your benefits:

- Bracket mounting for easy and fast assembly
- Version with LED display for checking the switching status directly at the sensor
- Version with plug connector for fast and easy extension cable replacement
- **Highly flexible PUR cable** for a long service life and resistance against many chemicals
- **Proximity switch is flush mountable** to reduce interfering contours in the application

Accessories

Customized Solutions

Automated Handling

Automotive Industry

Task: To move conrods using a transfer system.

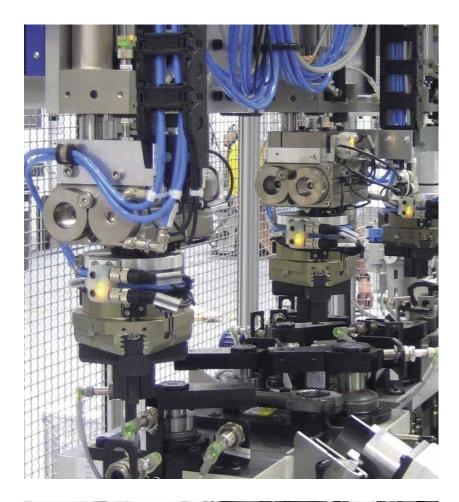

Solution: Eight SCHUNK stroke, swivel and gripping units are mounted on a horizontal SCHUNK linear axis with eight slides to move the workpieces on in a cycle.

Handling of Sand Cores

Foundry industry

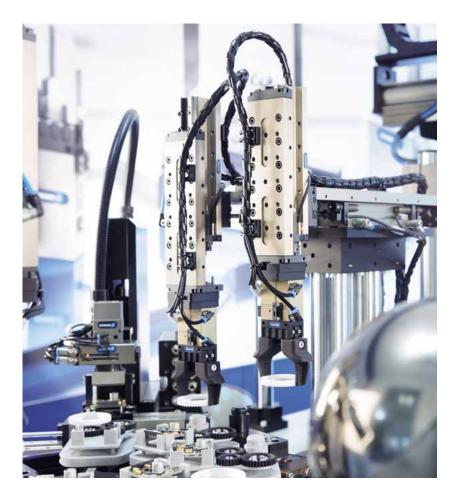

Task: Sand cores with different weights and interfering contours need to be gripped in a process-optimized way.

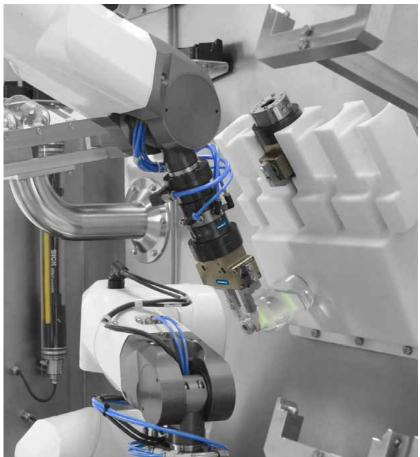

Solution: Using a SCHUNK quickchange system SWS in combination with sealed SCHUNK 2-finger universal grippers PGN-plus SD ensures a safe and precise hold. The SCHUNK gripping systems are designed for carrying loads up to 200 kg, depending on the application.

Customized Solutions

Handling Plastic Gears

Plastics Industry

Task: Plastic gears must be moved fast and accurately positioned during an assembly process.

Solution: Pneumatic and mechatronic SCHUNK Pick & Place units from the SCHUNK modular system come individually designed for use. As well as grippers for small components such as the SCHUNK MPG-plus.

Handling and Preparation of Pharmaceuticals

Life Science

Task: Reliable gripping of different containers during the preparation of pharmaceuticals.

Solution: A robot with a change system SCHUNK SWS is used for fully automated preparation of medications. Depending on the requirements and task, the robot changes flexibly to the appropriate gripper, such as the DPG-plus. In this way, patient-specific preparations or small and medium-sized series can be realized.

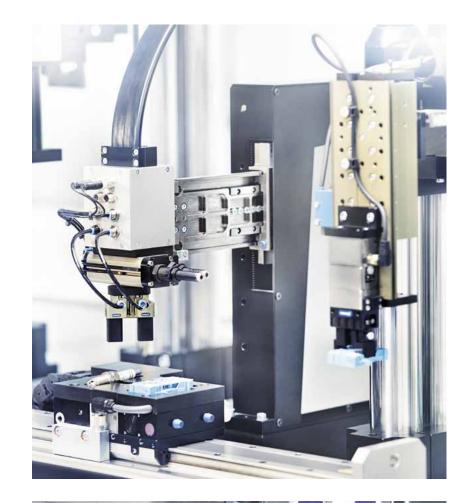

Customized Solutions

Handling of Hinge Parts

Metal Industry

Task: Hinge parts must be reliably transferred to the workpiece holder in the linear transfer system.

Solution: Electric and pneumatic SCHUNK Pick & Place components with pillar assembly system and a compact Pick & Place unit, SCHUNK gripper small components EGP and 2-finger parallel gripper PGN-plus as well as a swivel unit SRU-mini come available for use.

Handling of Worm Gear Shafts

Metal-cutting industry

Task: To remove worm gear shafts in a machining center and store them temporarily before they are machined further.

Solution: A customized SCHUNK gripping system solution comprising two pneumatic 2-finger parallel grippers PGN-plus mounted on a SCHUNK swivel head SRH-plus, which take in turns a finished ground part from a clamping device and load it with a raw part. Finish-machined parts are deposited on a pallet, raw parts are gripped from a pallet.

Customized Solutions

ij

Conrod Handling

Automotive Industry

Task: To save costs by multiple handling of conrod parts during production.

Solution: An especially developed connecting rod gripper based on a pneumatic SCHUNK universal gripper PGN-plus with special gripper fingers is mounted on a SCHUNK rotary module ERM. Due to the rotary module with adaptable drive, the same drive can be used as for the axis system. This creates a consistent drive concept.

Handling and Holding of Blood Collection Tubes

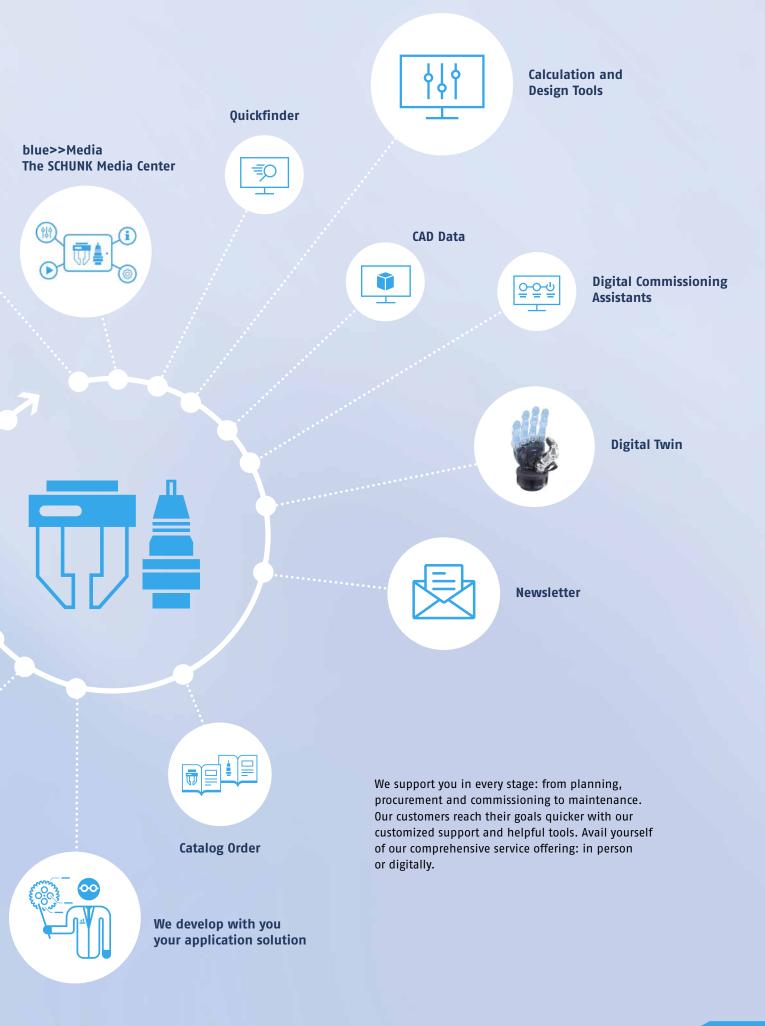

Life Science

Task: Gripping and holding of sensitive blood collection tubes during the untwisting process.

Solution: During automated sample taking, the gripper for small components SCHUNK EGP picks up and centers the blood collection tube. The gripper reliably holds the sensitive plastic tube while the screw cap is being opened, so that it cannot rotate with the cap.
