*Exclusive patented design!*  
See page 92 for a complete listing!

Features:

- Patented chipbreaker - Patent No. 6,146,064
- Maximum chip control
- Industry standard widths

#### Other Sheave Tolerances

Outside Diameter	Radial Runout	Axial Runout
Up through 2.9 in. outside diameter ± 0.010 in.	Up through 2.9 in. outside diameter ± 0.005 in.	0.001 in. per inch of outside diameter
Over 2.9 in. to and including 8.0 in. outside diameter ± 0.020 in. For each additional inch of outside diameter over 8.0 in., add ± 0.025 in. add 0.0005 in.	Over 2.9 in. to and including 10.0 in. outside diameter ± 0.010 in. For each additional inch of outside diameter over 10.0 in.,	

All dimensions in inches.

<sup>a</sup>Summation of the deviations from S for all groovers in any one sheave shall not exceed ± 0.010 in.

<sup>b</sup>Variations in pitch diameter between groovers in any one sheave must be within the following limits: Up through 2.9 in. outside diameter and up through 6 grooves, 0.002 in. (add 0.001 in. for each additional groove); over 2.9 in. to and including 19.9 in. and up through 10 grooves, 0.010 in. (add 0.0005 in. for each additional groove). This variation can be obtained by measuring the distance across two measuring balls or rods placed in the grooves diametrically opposite each other. Comparing this "diameter-over-balls or -rods" measurement between grooves will give the variation in pitch diameter.

<sup>c</sup>Total indicator reading.

BALLNOSE

### Rigid-Lock Ball Nose Cutter Nomenclature Chart

#### end mill style

- TBNS
- Finishing style ballnose end mill for precision milling applications
  - Inserts are CNC ground to tolerance of +/- .0005 effective in the cutter
  - Run at high speeds to reduce machining time by as much as 50%

#### TBDS

- Flat bottom/Back draft style for parts where square shoulders are required
- Inserts are CNC ground to tolerance of +/- .0005 effective in the cutter
- Run at high speeds to reduce machining time by as much as 50%

## TOOL-FLO GUARANTEE

All above endmills feature our patented **RIGID-LOCK** serrated locking system. Precision ground serrations provide increased stability in the pocket and allow for increased speeds/feeds while preventing insert movement in the pocket. No insert movement means longer insert life as well as longer cutter body life. **Tool-Flo Mfg will replace any cutter body that experiences pocket wear\***

\*excludes insert screw wear, or tools that have been crashed.

## RIGID-LOCK

## Grade Description

Grades	Descriptions
C26S	Uncoated, tough, fine grain substrate with sharp edge. Ideal for plastics and soft materials that produce little or no heat.
ZS26	PVD AlTiN grade with a tough, fine grain substrate. FIRST CHOICE for general applications in steels, stainless, and high temp alloys. Excellent in low to high speeds and will handle interruptions and high feed rates. Coating provides highest resistance to oxidation, physical abrasion and chip welding. Dry machining capable.
ZS26S	Same as grade AT26 except with a sharper edge for light depths of cut in finishing operations. FIRST CHOICE for non-ferrous and composite materials at medium to high SFM.
CB400	PCBN tip brazed onto a carbide insert. To be used for roughing to finishing in hardened steels greater than 45 HRC such as bearing steel, hot and cold work tool steels, high-speed steels, die steels, case hardened steels, nitrided irons and some hard coatings.
DX200	CVD PCD coated grade. Excellent wear resistance in nonmetallic materials such as graphite, epoxy based resins and plastics. FIRST CHOICE in aluminum and composites at high SFM.

## Shallow Cutting with Rigid-Lock Ball Nose End Mill

BALLNOSE

### Using your Rigid-Lock Ball Nose End Mill

Use Anti-seize grease every time an insert is changed.  
 Use positive geometry inserts on stainless, aluminum, titanium and Inconel.  
 Climb mill whenever possible.  
 Step over should be greater than depth of cut  
 Use TBF1 inserts if work piece has a draft angle on the walls. TBD1 inserts are for work pieces with straight walls.  
 Balance chipload, RPM, feed rate, tool extension, and material.  
 TBF1 and TBD1 inserts cannot plunge, ramp at 1° to 2° angle maximum.  
 1/4" and 5/16" endmills have a maximum feed rate of .006 to .008 per revolution and a .015 to .018 depth of cut.

## Using your Rigid-Lock Ball Nose End Mill for Roughing - TBXR

Adjust to your own cutting conditions.

Ex: Cutting 4140 material, 3/4 diameter ball nose insert, .010 chip load and .375 D.O.C.

Chip load per tooth: Should be a maximum of .007-.010.

Maximum Depth of Cut: Equal to half the radius of the insert.

Ex. If you are using a 1" diameter insert, then the D.O.C. would be up too 1/2".

**For optimal tool life of our ballnose system, we recommend lighter feed rates and higher surface speeds.**

### CUTTING DATA

TOOL-FLO MFG, on all threading and grooving bars, sets the cutting edge of inserts above centerline. This decreases the deflection reducing the load on the insert. The result is a better finish with less chatter. We recommend following the same procedure for boring operations.

\*When using the BB-312S/HM bar with a grooving insert .062 wide or greater, reduce the recommended IPR by 50%.

- Number of passes is dictated by the number of teeth on the insert.
  - 3-4 tooth requires 3-5 passes
  - 7 tooth requires 1-2 passes
  - One or two additional passes may be required for heat treated materials.

## American Standard Buttress Thread Designations

- When only the designation BUTT is used, the thread is a "pull" type buttress (external thread pulls) with the clearance flank (45°) leading and the pressure flank (7°) following.
- When the designation PUSH-BUTT is used, the thread is a push type buttress (external thread pushes) with the load flank (7°) leading and the 45° clearance flank following.
- Whenever possible this description should be confirmed by a simplified view showing thread angles on the drawing of the product that has the buttress thread.
- Always remember that the position of your holder and direction of your feed will determine the lead angle on the insert.

### Feed direction towards the chuck

### Feed direction towards the tailstock

## Threading Limits with Standard Flo-Lock Inserts

The following charts list the largest pitch that can be applied on internal applications for Acme and V-Threading Flo-Lock inserts in sizes 2,3, 4 and 6. For Buttress threads, please see previous page.

### 60° V-Threading Limits

FLT-2 Inserts internal threading limitations		
threads per inch	nominal thread size	minimum minor diameter
6	1-7/8	1.695
7	1-3/4	1.595
8	1-5/8	1.490
9	1-9/16	1.442
10	1-1/2	1.392
11	1-7/16	1.339

18	1-1/8	1.065
20	1-1/8	1.071
24	1-1/16	1.017

\* 24 TPI and finer can be cut with a #2 series insert provided that the minor diameter is 1.000 or larger.

### Acme Threading Limits

FLA-2 internal threading limitations		
threads per inch	nominal thread size	minimum minor diameter
6	2-1/2	2.333
8	2-1/4	2.125
10	2	1.900
12	1-3/4	1.667
14	1-5/8	1.554
16*	1-1/2	1.438

\*16 pitch acme threads and finer can be cut provided the minor diameter is 1.438 or larger.

## PCBN - Polycrystalline Cubic Boron Nitride Insert Nomenclature Chart

## PCBN Grade Descriptions

Grades	Descriptions
CB200	A high CBN content, PCBN tip brazed onto a carbide insert. Superior impact resistance. Ideally suited for machining cast iron and powder metal alloys, fully pearlitic gray cast iron, chilled irons; excellent results in high temperature alloys such as Inconel with an up sharp edge. Apply to tool steels and hard steels 45 HRC and higher; high chrome alloy steels. Application ranges from continuous to highly interrupted cuts.
CB400	A low CBN content, PCBN tip brazed onto a carbide insert. Ideally suited for roughing to finishing of hardened steels 45 HRC and higher. Use on bearing steel, hot and cold work steels, die steels, case hardened steels, carburized and nitrided irons.
CB410	PCBN tip brazed onto a carbide insert. Ideally suited for roughing to finishing of hardened steels 45 HRC and higher. Use on bearing steel, hot and cold work steels, die steels, case hardened steels, carburized and nitrided irons.

<b>CB200</b> <i>high content CBN for finishing</i>		< 240 HBN 1500 - 3500(457 - 1067) > 240 HBN 1000 - 2000(305 - 610)	300 - 600 (91 - 200)	500 - 1000 (152 - 305)	300 - 1000 (91 - 305)	
<b>CB400</b> <i>low content CBN for roughing</i>	400 - 500 (122 - 152)					375 - 500 (114 - 152)

### Recommended Edge Preparation

The following are suggestions for standard edge preparations.

Turning	CB200	.008 x 20° and/or .001 hone
Grooving (Flo-Lock and Vee-Bottom)	CB400	.004 x 20° and/or .001 hone

Due to unique applications, special edge preparations may be required.

T-Land and hones protect the cutting edge by eliminating a sharp cutting edge which reduces edge chipping and breakage. Up-sharp edges are prone to chipping or breakage.

T-Land and hones strengthen the cutting edges by redirecting the cutting forces back into the insert.

## Threadmilling Insert Nomenclature Chart

## Threadmilling Cutter Nomenclature Chart

## Solid Threadmill Nomenclature Chart

### TCT/TCN

- TCT cutters offer tapered head to accommodate NPT and NPTF style inserts
- TCN cutters offer straight head to accommodate UN and ISO style inserts
- Inserts are CNC ground to tolerance of +/- .0005 effective in the cutter
- Positive geometry provides high shear action which results in better quality threads

### TCP

- Cutters feature our patented locking system for accurate indexes
- Inserts are CNC ground to tolerance of +/- .0005 effective in the cutter
- Positive geometry provides high shear action which results in better quality threads
- Design allows for maximum number of flutes in minimum part diameter

### TCS

- Cutters feature our patented locking system for accurate indexes
- Inserts are CNC ground to tolerance of +/- .0005 effective in the cutter
- Positive geometry provides high shear action which results in better quality threads
- Design allows for maximum number of flutes in minimum part diameter
- Run at high speeds to reduce machining time by as much as 50%

### TSSI/X

- Produce better quality threads than tapping
- Excels in materials that are difficult to cut

THREAD MILLING

## Technical Information

### NPT & NPTF

When programming an NPT or NPTF thread form, a correction factor to compensate for the tapered thread form may need to be made. This is achieved by dividing the circular move into quarters or eighths, and moving the cutter out as the arc is generated so that the taper is included in the movement. The amount of taper for a given form is determined by the following formula:

$$\text{Taper per pitch} = \frac{.0625''}{\text{pitch}}$$

This amount of taper per pitch is then divided by number of programmed quadrants. This determines the amount that the cutter forms of the thread.

## Trouble Shooting & Optimizing Tool Life/ Threading Economy

Modern PVD grades and insert geometries have done much to improve the productivity and reliability of thread turning. They have also helped to eliminate or minimize problems in threading. The following chart lists problems, in order of severity, which may still occur in modern threading.

Problem	Cause	Solution
<b>Plastic Deformation</b>  <p>Starts as plastic deformation (1) which leads to plastic break (2)</p>	Excessive temperature in the cutting area Unsuitable grade Inadequate coolant supply	Reduce cutting speed Increase number of infeeds Reduce the largest infeed depth Check diameter before threading Improve coolant supply Choose grade with better resistance to plastic deformation
<b>Built-up Edge/ Edge Spalling</b>  <p>Built-up edge (1) and edge spalling (2) often occur in combination. Built-up edge accumulates and is then ripped away taking insert material with it</p>	Cutting edge temperature too low Stainless material; CMC codes 05.2, 05.51, and 05.52 Low carbon steel Unsuitable grade	Increase cutting speed Choose an insert with good toughness, preferably PVD coated
<b>Insert Breakage</b> 	Wrong Diameter prior to threading operation  Infeed series too tough Unsuitable grade Poor chip control Center height incorrect	Turn to correct diameter before threading--0.0012-0.0028 radially larger than maximum diameter for thread Increase number of infeeds Reduce size of the large infeeds Choose a tougher grade Change to "CB" geometry and use modified flank infeed Correct center height
<b>Rapid Flank Wear</b> 	Highly abrasive material Cutting speed too high Infeed depths too shallow Insert is above centerline	Choose a more wear resistant grade Reduce cutting speed Reduce number of infeeds Correct center height
<b>Abnormal Flank Wear Poor Finish on One Flank of Thread</b>	Incorrect method for flank infeed Insert's inclination angle does not agree with thread's lead angle	Change method of infeed Change shim to obtain correct angle of inclination
<b>Vibration</b>	Incorrect clamping work piece Incorrect set-up of the tool Incorrect cutting data Incorrect center height	Use softer jaws Minimize overhang of tool Check that the clamping sleeve for bars is not worn Increase cutting speed; if this does not help lower speed dramatically Use constant infeed series Try "CB" or "HCB" geometry Adjust the center height Use heavy metal, solid carbide or carbide cored bar.
<b>Poor Surface Quality on Thread</b>	Cutting speed too low The insert is above center Uncontrolled chips	Increase cutting speed Adjust center height Use "CB" or "HCB" geometry and modified flank infeed

Problem	Cause	Solution
<b>Poor Chip Control</b>	Incorrect method of infeed Wrong geometry	Modified Flank infeed 3P-5P "CB" or "HCB" geometry with modified flank infeed 1P
<b>Shallow Profile</b>	Wrong center height Insert breakage Excessive wear	Adjust the center height Change cutting edge
<b>Incorrect Thread Profile</b>	Unsuitable thread profile angle of thread and nose radius; external inserts used for internal operation and vice versa Wrong center height Holder not 90° to center line Pitch error in machine	Correct tool / insert combination Adjust the center height Adjust to 90° Correct in machine
<b>Excessive Edge Pressure</b> 	Work hardening material in combination with infeed depths which are too shallow Excessive pressure on cutting edge Profile with too small thread profile angle	Reduce the number of infeeds Change to "CB" or "HCB" geometry Use a tougher grade Use incremental flank infeed

## Optional Infeed Angles for Threading Applications

**Advantage-**  
Cutting on both sides of the thread form places all of the cutting edge in the cut and protects edge from chipping.

**Disadvantage-**  
Tool develops a channel chip which may be difficult to handle.

Tip chipping occurs when cutting high-tensile materials.

Burr condition is increased.

Entire cutting edge is engaged at finish of thread, causing increased tendency to chatter.

**Advantage-**  
Cutting with the leading edge of the threading tool gives the chip a definite flow out of the thread form area. This reduces the burr problem on the trailing edge of the tool. To avoid bad surface finish, chipping, or excessive flank wear due to rubbing of the trailing edge, the infeed angle should be 3P to 5P smaller than the angle of the thread. This is a type of modified flank.

**Disadvantage-**  
Trailing edge of threading insert may drag or rub, and tends to chip.

Torn or poor surface finish threads result when cutting soft, gummy materials such as low carbon steels, aluminum, and stainless steels.

**Advantage-**  
Tool cuts both sides of thread form and, therefore, is protected from chipping similar to 0P infeed. Channel-type chip develops but uneven chip thickness helps remove the chip similar to flank infeed.

**Disadvantage-**  
Similar disadvantages as with 0P infeed, although slightly reduced in magnitude as the cutting forces are better equalized and chip flow is much less of a problem.

**Advantage-**  
Increased tool life because both edges are used equally. NOTE: Some machine tools may require special programming techniques to achieve this method.

**Disadvantage-**  
Difficult to cut on conventional machinery.

### Grade Description Chart

G50	CVD TiN/TiC/TiN grade. API chaser grade for Q-Series material.
GP22	PVD TiN grade with a tough, micro-grain substrate. Good for threading at low to medium speeds, while capable of handling interruptions. Works well in stainless steel, high-temperature alloys, and standard steels at low to medium SFM.
GP25	PVD TiN grade for non-ferrous materials.
GP26	PVD TiN grade with a tough, micro-grain, unalloyed substrate. Rigid-Lok endmill grade. Good choice for steels, stainless, high-temperature alloys, and non-ferrous materials. Good in low to high SFM, will handle interruptions and high feed rates.
GP3	PVD TiN grade with a wear resistant micro-grain substrate. Excellent choice in stainless steels, high-temperature alloys, aerospace materials, and non-ferrous materials. Good in standard steels at low to medium SFM.
GP4	PVD TiN grade with our toughest substrate. <b>First choice</b> at low SFM (50-150) applications and heavy interruptions. Used in all applications where tool breakage is an issue.
GP54	PVD TiN grade with a tough substrate.
GP5	PVD TiN grade with a medium tough substrate. Good general purpose grade for steel applications. Primary grade in LPGC and TPGC style inserts.
GP50	PVD TiN grade with a medium tough substrate and excellent wear properties. Great general purpose grade for steel applications.
AC22	PVD TiAlN grade with a tough, micro-grain substrate. <b>First choice</b> in <b>Laydown Threading</b> in all materials. Dry machining capable.
AC26	PVD TiAlN grade with a tough, fine grain, unalloyed substrate with excellent wear properties. <b>First choice</b> in <b>Rigid-Lok</b> inserts for steels, stainless, high-temp alloys, and non-ferrous materials. Performs very well at low to high SFM and will handle interruptions and high feed rates. Coating provides highest resistance to oxidation, physical abrasion, and chip welding. Dry machining capable.
AC3	PVD TiAlN grade. <b>First choice</b> for grooving and threading in stainless steel, high-temperature alloys, aerospace materials, and non-ferrous materials. Excellent in standard steels at medium SFM. Dry machining capable.
AC50	PVD TiAlN grade. <b>First choice</b> for grooving and threading in all standard steels and 400 series stainless. Application range is medium to high SFM. Dry machining capable.
ZA22	PVD TiAlN grade with a tough, micro-grain substrate. Dry machining capable.
ZA26	PVD TiAlN grade with a tough, fine grain, unalloyed substrate with excellent wear properties. <b>First choice</b> in <b>Rigid-Lok</b> inserts for steels, stainless, high-temp alloys, and non-ferrous materials. Performs very well at low to high SFM and will handle interruptions and high feed rates. Coating provides highest resistance to oxidation, physical abrasion, and chip welding. Dry machining capable.
ZA3	PVD TiAlN grade. <b>First choice</b> for grooving in stainless steel, high-temperature alloys, aerospace materials, and non-ferrous materials. Excellent in standard steels at medium SFM. Dry machining capable.
ZA50	PVD TiAlN grade. <b>First choice</b> for grooving and threading in all standard steels and 400 series stainless. Application range is medium to high SFM. Dry machining capable.
ZS22	PVD AlTiN grade with a tough, micro-grain substrate. Good in <b>Laydown Threading</b> in all materials. Dry machining capable.
ZS26	PVD AlTiN grade with extra lubricity, a tough, fine grain, unalloyed substrate with excellent wear properties. <b>First choice</b> in <b>Rigid-Lok</b> inserts for steels, stainless, high-temp alloys, and non-ferrous materials. Performs very well at low to high SFM and will handle interruptions and high feed rates. Coating provides highest resistance to oxidation, physical abrasion, and chip welding. Dry machining capable.
ZS3	PVD AlTiN grade for grooving and threading in stainless steel, high-temperature alloys, aerospace materials, and non-ferrous materials. Excellent in standard steels at medium SFM. Dry machining capable.
ZS50	PVD AlTiN grade for grooving and threading in all standard steels and 400 series stainless. Application range is medium to high SFM. Dry machining capable.
ZL22	PVD grade with a tough, micro-grain, unalloyed substrate. Good for turning at low to medium speeds, while capable of handling interruptions. Works well in high-temperature alloys and aluminum.
ZL26	PVD grade with a tough, micro-grain, unalloyed substrate. Rigid-Lok endmill grade. Good choice for aluminum, high-temperature alloys, and non-ferrous materials. Good in low to high SFM, will handle interruptions and high feed rates.
ZL3	PVD grade with a wear resistant micro-grain substrate. Excellent choice in high-temperature alloys, aerospace materials, and non-ferrous materials.

ZR22	PVD AlTiN grade with a tough, micro-grain, unalloyed substrate. Good for threading at low to medium speeds, while capable of handling interruptions. Works well in stainless steel, high-temperature alloys, and standard steels at low to medium SFM.
ZR26	PVD AlTiN grade with a tough, micro-grain, unalloyed substrate. Rigid-Lok endmill grade. Good choice for steels, stainless, high-temperature alloys, and non-ferrous materials. Good in low to high SFM, will handle interruptions and high feed rates
ZR3	PVD AlTiN grade with a wear resistant micro-grain substrate. Excellent choice in stainless steels, high-temperature alloys, aerospace materials, and non-ferrous materials. Good in standard steels at low to medium SFM.
ZR50	PVD AlTiN grade with a medium tough substrate and excellent wear properties. Great general purpose grade for steel applications.
ZU22	PVD AlTiN grade with a tough, micro-grain, unalloyed substrate. Good for threading at low to medium speeds, while capable of handling interruptions. Works well in stainless steel, high-temperature alloys, and standard steels at low to medium SFM.
ZU26	PVD AlTiN grade with a tough, micro-grain, unalloyed substrate. Rigid-Lok endmill grade. Good choice for steels, stainless, high-temperature alloys, and non-ferrous materials. Good in low to high SFM, will handle interruptions and high feed rates.
ZU3	PVD AlTiN grade with a wear resistant micro-grain substrate. Excellent choice in stainless steels, high-temperature alloys, aerospace materials, and non-ferrous materials. Good in standard steels at low to medium SFM.
ZU50	PVD AlTiN grade with a medium tough substrate and excellent wear properties. Great general purpose grade for steel applications.
C22	Uncoated grade with a tough, micro-grain, unalloyed substrate. Good for threading at low to medium speeds, while capable of handling interruptions. Works well in stainless steel, high-temperature alloys, and standard steels at low to medium SFM.
C25	Uncoated general purpose C2 grade. Good for all non-ferrous materials.
C26S	Uncoated grade with a tough, fine grain, unalloyed substrate. Main uncoated grade for Rigid-lock endmill inserts. Edge is up-sharp for use in non-ferrous and composite applications.
C3	Uncoated micro-grain C3 grade. Good for all non-ferrous, stainless steel, and nickel-based alloys.
GPM6	PVD TiN coated cermet grade. <b>First choice</b> for grooving in high-speed finishing of most carbon, alloy, and stainless steels. Performs very well in cast and ductile irons. Provides excellent workpiece finishes.
CB200	PCBN tip brazed onto a carbide insert. High content CBN. <b>First choice</b> for cast iron and high-temperature alloys. Suited for roughing to finishing in hardened steels greater than 45 HRC, such as bearing steel, hot and cold work tool steels, high-speed steels, die steels, case hardened steels, nitrided irons, and some hard coatings.
CB400	PCBN tip brazed onto a carbide insert. Low content CBN. <b>First choice</b> for roughing to finishing of hardened steels 45 HRC and higher. Use on bearing steel, hot and cold work steels, die steels, case hardened steels, carburized and nitrided irons.
CB410	PCBN tip brazed onto a carbide insert. Low content CBN. <b>First choice</b> for roughing to finishing of hardened steels 45 HRC and higher. Use on bearing steel, hot and cold work steels, die steels, case hardened steels, carburized and nitrided irons.
PC33	PCD tip brazed onto a carbide insert. <b>First choice</b> for high silicone aluminum applications at high SFM. Use on all types of highly abrasive materials including non-ferrous metals and non-metallics. High SFM only!
DX200	PCD CVD coated grade. Rigid-Lok insert grade. <b>First choice</b> at high SFM in non-metallic materials such as graphite, epoxy based resins, plastics, and aluminum.

\*For premium performance based upon optimal machining conditions, select the grade that will provide you with the highest allowable SFM for the material that is being machined. Optimum grades are in bold print. Grades are specific to certain insert styles. The grades listed below in bold print are stock within the style listed, see appropriate catalog page for precise stocking status.

## ORDERING INFORMATION

### CONDITION OF SALE

Sales are made in accordance with our standard Conditions of Sale current at the time orders are accepted. Specifications and prices subject to change without notice.

### QUOTATIONS

Will be subject to acceptance 60 days from the date of quotation unless otherwise agreed. **In order to receive special quoted pricing, a quote number must be referenced at the time the order is placed.**

### TERMS OF PAYMENT

Net 30 Days

### DELIVERY TERMS

F.O.B. Shipping point; Charges will be added to invoice.

### WARRANTY

We will replace any material which is proven defective within 90 days from date of shipment to the customer. No claim for labor or damage will be allowed. Claims for error must be made upon receipt of material.

### PRICING

So far as the resale of items in this price list is concerned, the prices referred to are to be regarded as suggested only. The distributor, in its sole discretion, determines the actual resale price. These suggested resale prices are based on quantities of identical items released by purchaser on one order for shipment at one time to one destination. The reseller should determine whether savings in cost can justify the suggested quantity price differential, as may be required by the Robinson-Patman Act or other applicable law.

### OVER AND UNDER SHIPMENTS

For Non-Stock or Special items, unless otherwise specified or agreed, the following over and under allowances may be made:

Lots of	10-19	20-49	50-99	100+
Over/Under	1 piece	2 pieces	3 pieces	5%

### MINIMUM ORDER

\$50 Net per order. For Extended Discount Program - \$100 Net per order.

### RETURNS

Each Distributor will be allowed at a certain time of year to exchange 1% of their Net Sales for the previous year up to a maximum of \$1,000. These exchanges will be limited to Stock Standard items only and will be replaced by such. The exchange schedule is as follows:

Group A Distributors:	January - March
Group B Distributors:	July - September
Group C Distributors:	April - June
Group D Distributors:	October - December

All Non-Stock and Specials are non-returnable and/or non-exchangeable.

A Returned Material Authorization (RMA) number must be assigned by Tool-Flo prior to any material being returned. Purchase Order numbers and original invoice numbers must be supplied before an RMA number can be issued.

### RELEASE ORDER POLICY

- A. Prices are to be based on total quantity of each item. Prices will be firm for six (6) months from the date of purchase. In the event of a price increase during the term of the order, one of the following conditions will apply:
- If the increase becomes effective during the first six (6) months of the order, the balance of the order can be released within six (6) months from the date of purchase at existing prices. Any subsequent releases will be invoiced at the new price.
  - If the increase becomes effective after the first six (6) months of the order, the balance can be released immediately upon notification of the price increase at existing prices. All items not released immediately will be invoiced at the new price.
- B. Minimum release order is 400 pieces. Releases must be made ever 30 days. Initial release must be made within 30 days of order date. Minimum release is 50 pieces every 30 days. Releases not to exceed twelve (12) months. At the end of the twelve (12) month period from the date of the order, any remaining pieces will be shipped.
